

Our Weather Story

(Stories provided by visitors to Watershed Discovery Day)

With climate change we are experiencing heavier rains, and our house gutters cannot handle the amount of water, so it spills over the top. Manufacturers need to offer larger gutters more in keeping with today's weather.

My daughter in Australia is suffering from mould due to the constant rainfall in the Sydney area.

I hate the increasing heat and humidity!!! It makes me grumpy and hard to be around.

Always love the change of seasons.

The snow storm in January gave me 5 snow days in a row.

The January snow storm made us snowed in on a private road. We had lots of time to get better at euchre.

This may a storm went through the maple bush, which resulted in dozens of fallen trees. This will dramatically reduce our maple syrup crop next year.
